

## Features and Benefits

- Features multi-site biochemical modes of action which destroy pathogens from inside out and offer growers an excellent resistance management strategy
- Excellent food safety ratings with 0-day PHI and exemption from residue tolerances
- Provides high degree of worker safety with 4-hour REI
- Excellent tank-mix and rotational partner
- No CODEX restrictions for international sales of treated commodities
- OMRI Listed
- Can be used for conventional and organic production

Better Quality**

## BALLAD® PLUS - Better Quality and Late Season Disease Control for Soybeans

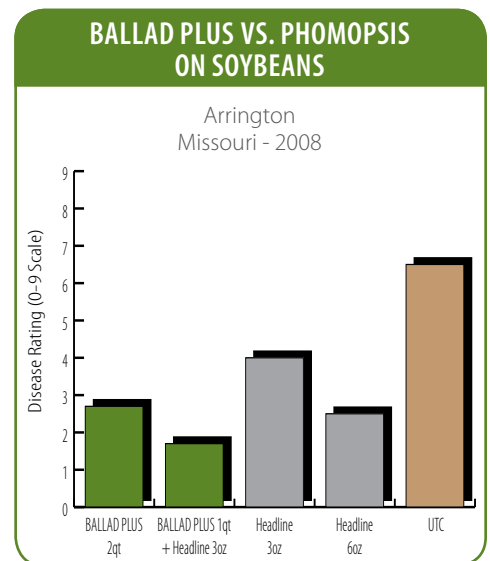

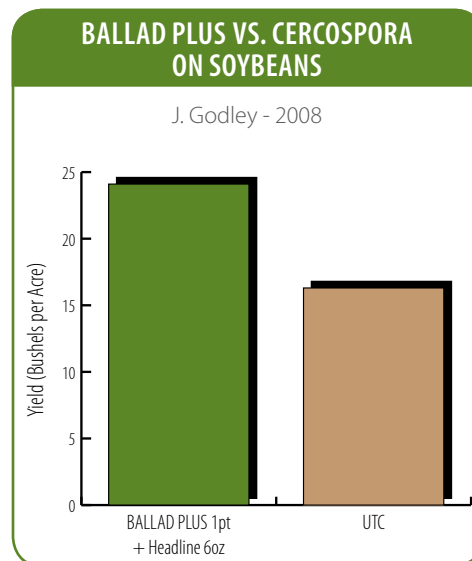

Powered by the complex biochemistry of *Bacillus pumilus*, BALLAD PLUS produces anti-fungal compounds that target pathogens while activating the plant's defense systems resulting in healthier plants.

BALLAD PLUS provides control of late-season diseases including Cercospora and Phomopsis. Using 2 quarts of BALLAD PLUS alone provides the same

efficacy as a strobilurin at the highest labeled rate, while 1 quart of BALLAD PLUS in a tank-mix with the lowest labeled rate of a strobilurin fungicide provides excellent disease control, higher yield, and helps prevent resistance build-up.

Do the math and add BALLAD PLUS to your soybean disease control program today!

### BALLAD PLUS for Control of Cercospora on Soybeans

**1-4 qt.  
per acre**

Begin application soon after emergence and when conditions are conducive to disease development. Repeat on 7 to 14 day intervals or as needed. Use higher rates and shorter application intervals under heavy disease pressure.

Can be used for Conventional & Organic Production
