

Features and Benefits

- Features multi-site biochemical modes of action which destroy pathogens from inside out and offer growers an excellent resistance management strategy
- Excellent food safety ratings with 0-day PHI and exemption from residue tolerances
- Provides high degree of worker safety with 4-hour REI
- Excellent tank-mix and rotational partner
- No CODEX restrictions for international sales of treated commodities
- OMRI Listed
- Can be used for conventional and organic production

BALLAD PLUS for
control of ASR

Use BALLAD® PLUS for Control of Asian Soybean Rust

Control Asian Soybean Rust with BALLAD PLUS fungicide. Both research and commercial experience show that using the lowest labeled rate of a strobilurin fungicide with 1 quart of BALLAD PLUS significantly lowers the severity of ASR on soybeans.

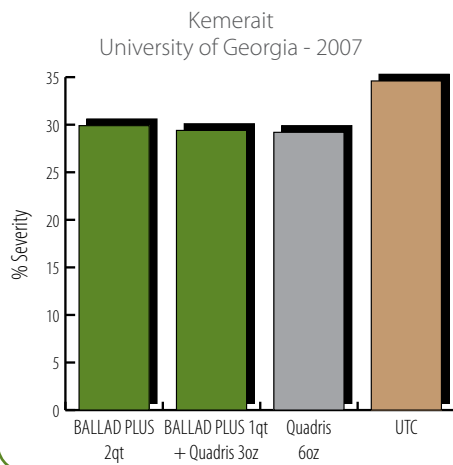

Powered by the complex biochemistry of *Bacillus pumilus*, BALLAD PLUS produces anti-fungal compounds that

target pathogens while activating the plant's defense systems. Including BALLAD PLUS in a tank-mix helps minimize resistance build-up to valuable strobilurin fungicides while controlling diseases such as ASR helps increase yield.

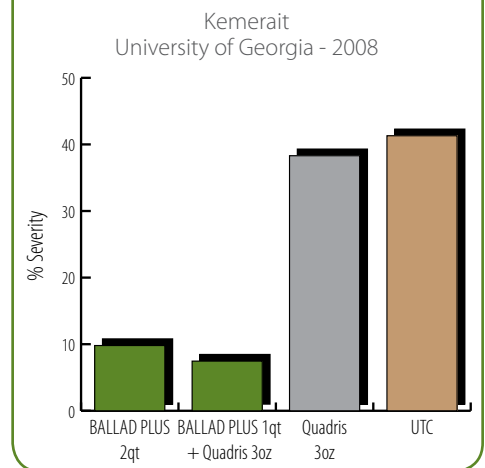

Do the math and add BALLAD PLUS to your soybean disease control program today!

BALLAD PLUS for Control of Asian Soybean Rust

**1-4 qt.
per acre**

Use as part of a program with other fungicides labeled for Asian Soybean Rust. Begin application soon after emergence and when conditions are conducive to disease development. Repeat on 7 to 14 day intervals or as needed. Use higher rates and shorter application intervals under heavy disease pressure.

Can be used for Conventional & Organic Production
